

# User Manual - Getting started with a Scorm Course

This guide aims to help you setup and upload a Scorm package into your course(s). In this guide we will use screen shots of [atingi.org](http://atingi.org)

1.5	Step 5: . . . . .	4

# 1 Uploading a SCORM package

## 1.1 Step 1:

Click anywhere on the course that will host your SCORM package to enter the 'Edit' screen or mode. e.g on atingi.org click the button 'TURN EDITING ON'

The screenshot shows the Atingi platform interface. On the left is a pink sidebar with navigation options: 152661-A, Participants, Competencies, Grades, User badges, HOME, Content bank, and Site administration. The main content area has a header with the course title 'Artificial Intelligence for All: Open AI Training Data for African Languages' and a 'TURN EDITING ON' button. Below the header is a course card featuring an illustration of people, the course title, a 17% progress indicator, and descriptive text about AI training data challenges in African countries.

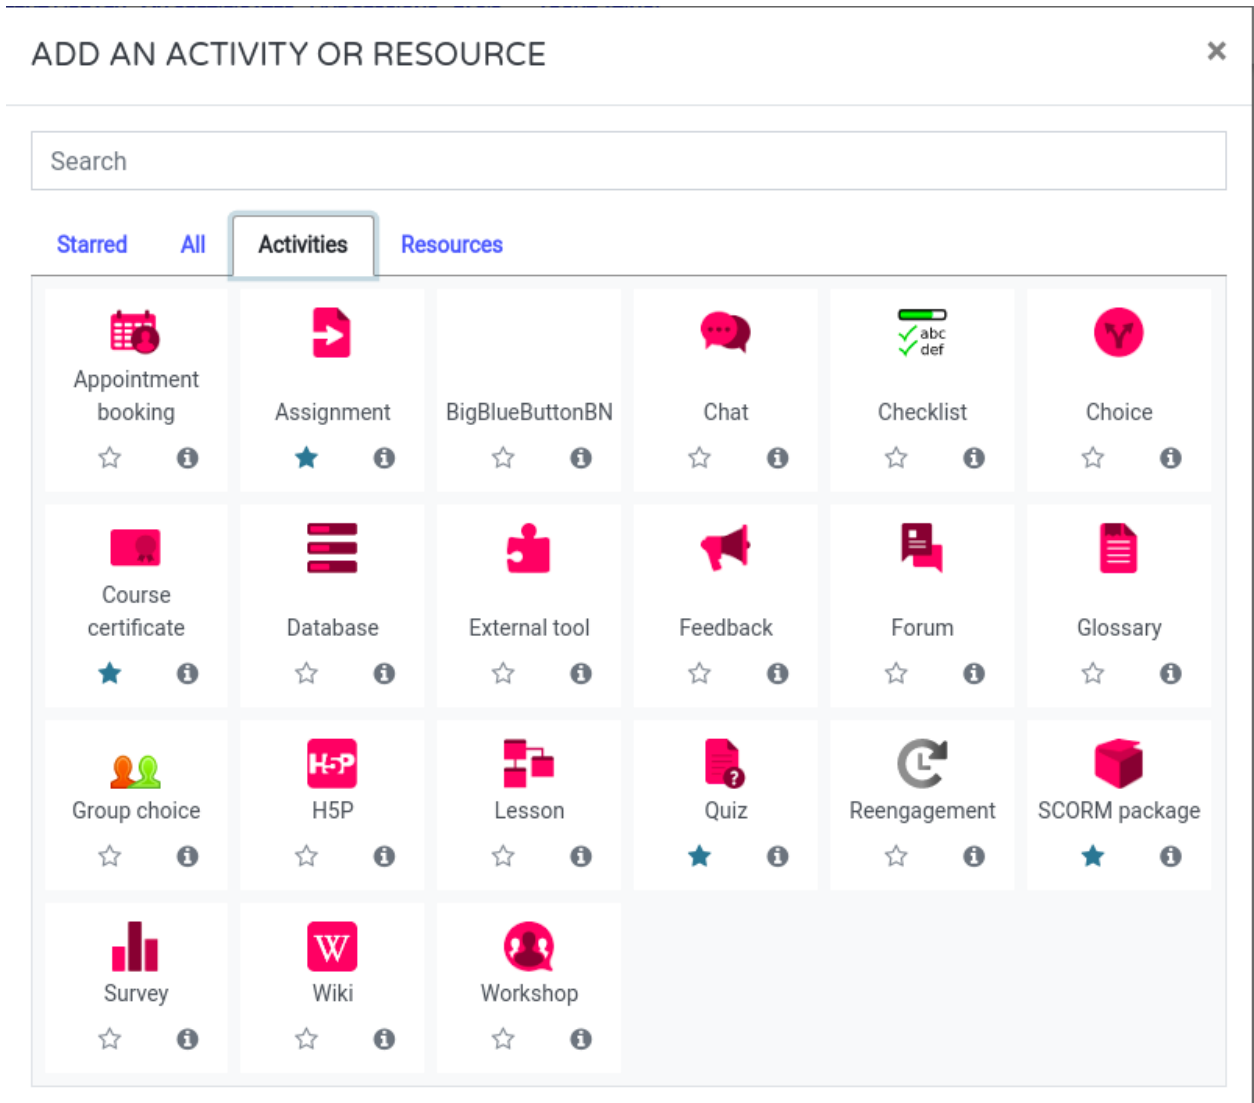

## 1.2 Step 2:

Once the page has loaded, navigate to the Modules tab, then select the Add module button.

This screenshot shows the 'Modules' tab selected in the course edit interface. The sidebar remains the same. The main area displays a list of modules under the 'Modules' heading, including 'How to Access Open Voice Training Data', 'Assessment One' through 'Assessment Four (optional)', and 'End of Course Assessment'. A 'Certificate for Open AI Training Data for African languages' is also listed. Below the modules is a 'Discussion' section with a 'Discussion' item. A '+ Add' button is visible in the top right of the modules list.

### 1.3 Step 3:

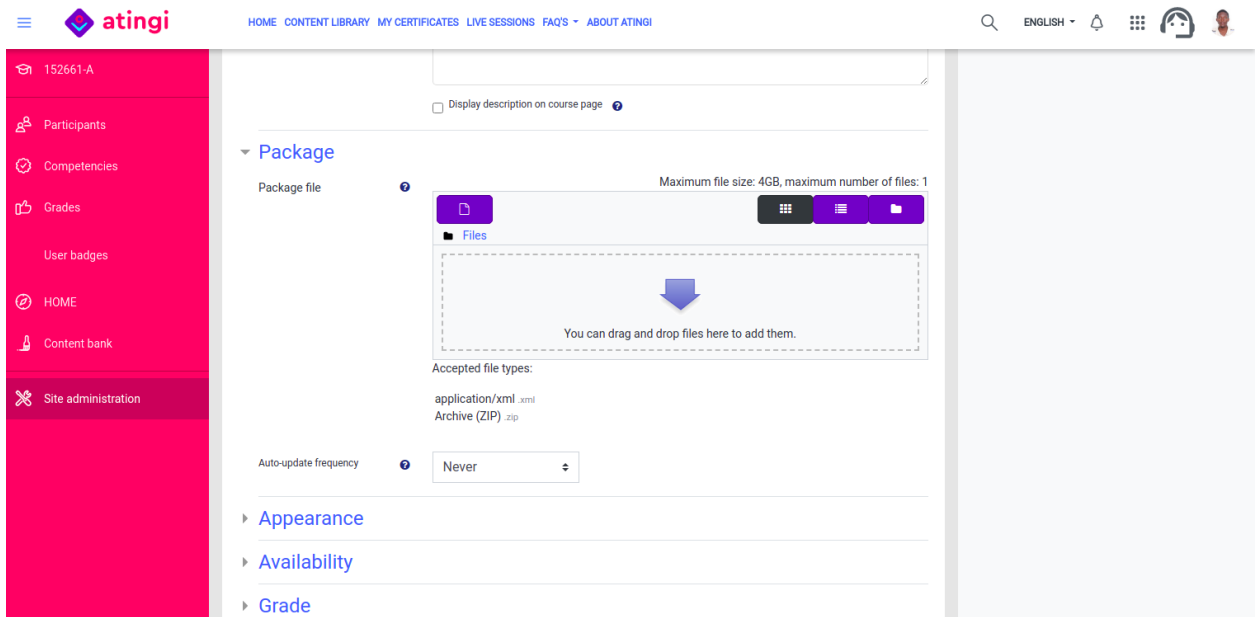

From the Add module screen, click on the 'SCORM package' button.

### 1.4 Step 4:

Once the page loads, navigate to the 'Package' tab 'Drop a file or browse files'

Click on 'You can drag and drop files here to add them.', select your SCORM package from your computer. Don't forget to give your SCORM package a title before saving your changes.

## 1.5 Step 5:

The Course Pathway should now display your new SCORM package. To ensure that the SCORM package is working properly click on it.
